

ARAY

Collaborative Workspaces

MAI introduces ARAY, the industry's first crossover system combining the simplicity of desking and systems furniture. Desktop glass screens in various colors elegantly divide space without affecting communication or light transfer. Translucent floor privacy screens in subtle shades provide additional privacy and define boundaries in large open spaces. ARAY features a full range of storage options, including user adaptable drawers, multi-function towers and personal storage lockers ideal for the telecommuter. And for technology intensive environments, ARAY offers the optional MAI Multi-User Telecommunication Outlet Assembly (MUTOA), a patented technology that eliminates work area outlets and cable patch cords, effectively reducing cable clutter and overall cabling cost.
